FOR IMMEDIATE RELEASE
October 2, 2008

TRAINED IT SECURITY ENGINEERS IN DEMAND
Newly released CCNA – Security iCOD™ gives engineers a new option

IT engineers who are responsible for network security must continually stay on top of the newest security threats by making sure they have the most current and cutting edge training. While the need for training increases, the available time and budget for the training is decreasing. Companies today need employees who are adequately trained to keep their networks secure, but simply don't have enough room in their budget to pay for the training, travel expenses and accommodations. In addition to these expenses, they also lose the productivity of the employee who is away for training courses that can last anywhere from 5 to 17 days.

According to Dawn Tesar, Director of Marketing for CCBOOTCAMP, the release of the new iCOD™ – Class on Demand, which contains training for the Cisco CCNA Security course, will meet many of the needs these engineers have. "Engineers today need a product that is portable, convenient and affordable," says Tesar. She also noted that engineers at all levels of training and experience are looking for better options.

The first Cisco authorized training course to be released on the iPod™ is CCNA Security, Implementing Cisco IOS Network Security. This Cisco authorized training covers over 40 hours of classroom instruction using lecture and labs in this convenient iPod™ format. It is specifically designed to prepare the engineer for the CCNA Security IINS exam. Students also have 40 hours of virtual rack time where they can work through scenarios and homework assignments to get practical experience. An engineer from a local technology company said that this course is innovative and remarkable for several reasons. First, the portability of the product is unmatched. Engineers can access the lessons while commuting, at home or at work without the need of a laptop. Second, students are able to put into practice what they're learning as they're learning it by using the virtual racks. They also receive dedicated instructor mentoring via www.securityie.com to ensure all concepts are completely understood. Finally, the course is affordable for almost all individuals and companies. Companies can actually save money because they don't have to pay for travel and lodging or loose employee productivity.

Additional Cisco courses are expected to be released in this iCOD™ format in the coming months to cover all levels of Cisco certifications from the CCENT level through the CCIE level.

CCBOOTCAMP, a division of Network Learning, Inc. was founded in 1998 to provide authorized Cisco and CompTIA training courses for IT engineers at every level of expertise. The company offers training solutions to individuals as well as companies who employ engineers to maintain their networks.
